DESCRIPTORS: *Copolymerization, *Styrenes,
Chlorides, *Acrylic resins, Chemical reactions.

The velocity of copolymerization of chlorostyrenes
with styrene and with methyl methacrylate depends
upon the proportions of the reactants. The higher is
the content of the monomer in the reaction mixture,
which is characterized by a higher velocity of poly-
merization, the greater is the velocity of copolymeri-
zation. In copolymerization of p-chlorostyrene with
styrene the reaction velocity increases in proportion to
